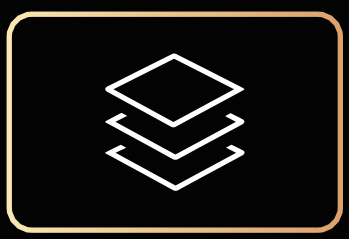
Professional Treatment Planning

Created by professionally educated dentists, most of whom have independently served over 1000 patients.

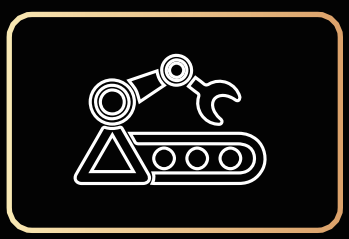
Model Processing

We prepare your models by adding essential features like fixtures, cut lines, and other adjustments to ensure compatibility with your machinery.



3-Layer TPU Material

The 3-layer TPU material features high tensile strength, high modulus, and good biocompatibility, an ideal choice for the production of clear aligner.



Automated Aligner Production

You send us ready-to-print models, then we take care of the entire production process, using high-quality materials and precision equipment to produce your aligners.

Customized Branding and Packaging

We provide laser-marked aligners with your brand name and customized packaging based on your design.

Customized Case Management Portal

Up on your request, a custom-branded portal can be set up to connect your aligner practitioners with your business, streamlining case management and order tracking.
